

PNEUMATIC SCALE SC | Servo Rotary Capper

Engineering Excellence • Accuracy • Reliability

The SC capper is ideal for both round and non-round containers for almost any application requiring screw caps, press-on caps, plugs, and overcaps for glass, metal, plastic, and fiberboard containers. Eliminating container slippage, along with the use of servo motors, guarantees accurate torque control without wear parts or constant maintenance. The SC capper's design provides in-process control using the servo's precise torque control, feedback, and diagnostic capabilities. Capping application torque is ± 1 inch-lb. or better, across a range of 5 to 30, or 15 to 100 in-lbs.

Product Detail

- Sanitary stainless steel design
- Reduction in inertia effects
- Positive container handling and no container/no pump features
- No container/no pump feature
- Tool-free changovers of containers and caps in under 15 minutes with the Zepf MARK II® Change Part System
- industry leading touchscreen interface for simple machine adjustments and control of all capper functions and display diagnostics
